

Rezor

Whitepaper

Introduction

Rezor is a comprehensive, multi-utility blockchain ecosystem designed to bring decentralized finance into the hands of everyday users. In a world where blockchain projects often struggle to find real-world relevance, Rezor distinguishes itself by delivering products with tangible use cases, streamlined interfaces, and scalable infrastructure. By integrating core functionalities such as a wallet, swap aggregator, blockchain layer, and centralized exchange, Rezor builds a unified platform that enables users, developers, and businesses to seamlessly navigate the digital economy.

At the heart of this ecosystem lies the \$REZOR token. More than a digital asset, \$REZOR is the fuel that drives activity, rewards participation, and aligns incentives across all stakeholders. Whether it's staking through the wallet, providing liquidity via the swap interface, trading on the exchange, or building on the Rezor blockchain, the token plays a critical role in powering the ecosystem.

Why Rezor?

The current landscape of Web3 is saturated with short-lived projects focused on speculation. Rezor was born from the belief that blockchain technology should be both powerful and practical. Instead of building isolated products or following hype-driven trends, Rezor takes a foundational approach. Every product is designed with the long-term vision of being part of a sustainable and accessible global financial ecosystem.

By focusing on products that solve real problems—such as crypto payments, low-cost trading, and secure self-custody—Rezor is positioned not only to capture short-term users but to retain them through continual innovation and usability.

Mission & Vision

Rezor's mission is to create a suite of blockchain-powered tools that are accessible, reliable, and efficient for users across all demographics and geographies. We aim to bridge the gap between centralized financial systems and decentralized technology by simplifying crypto access and incentivizing meaningful engagement.

Our vision is to build a borderless digital economy—one that provides financial sovereignty and access to all individuals regardless of their location. From digital freelancers in Nairobi to small business owners in Bangalore, we envision Rezor as a platform that empowers users to control their financial future without relying on legacy intermediaries.

Products

Rezor Wallet

Rezor Wallet is currently live on Android and serves as the first point of contact for users entering the ecosystem. It is a non-custodial wallet designed with simplicity and security at its core. The wallet enables users to store, send, and receive assets, and includes integrated features such as aggregator-powered token swaps, staking tools, debit card support, and bulk transaction capabilities. With an iOS version underway and regular updates planned, the wallet is set to become one of the most versatile tools in the space.

Rezor Swap

Rezor Swap is a decentralized exchange aggregator designed to optimize DeFi trading experiences. By integrating multiple liquidity sources into a single interface, it ensures that users receive the best execution rates across decentralized exchanges. The swap engine will be deeply integrated with the wallet, allowing for seamless DeFi access with minimal complexity.

Rezor Blockchain

Rezor Blockchain is a purpose-built Layer Zero infrastructure protocol, engineered to support scalable dApps, smart contracts, and tokenized assets. It offers developers the tools they need to build interoperable, high-performance applications with low fees and high throughput. Its Layer Zero architecture allows for native cross-chain communication, opening the door for projects and protocols from other ecosystems to interact with Rezor.

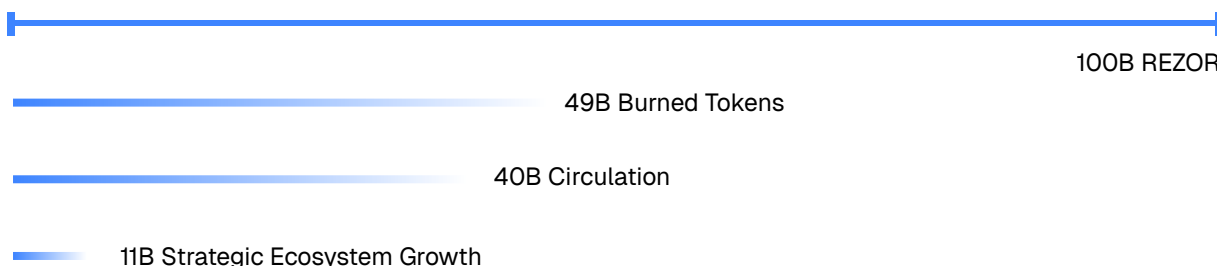

Rezor Exchange

Rezor Exchange is a centralized trading platform focused on delivering a secure, intuitive experience for users. Designed for both beginners and professionals, the exchange will support fiat on/off ramps, deep liquidity pairs, and partner project listings. With strong compliance and operational standards, it will serve as a bridge between traditional and decentralized finance.

Note: All features mentioned for the Rezor Wallet, Swap, Blockchain, and Exchange are part of the intended roadmap. Some features may not be available at the time of launch and will be introduced progressively as development advances. The Rezor team is committed to delivering these utilities in phases, with transparency and regular updates to the community.

Tokenomics

The \$REZOR token has a fixed total supply of 100 billion. From this, 49 billion tokens have already been permanently burned to reduce long-term inflation and drive scarcity. Another 40 billion are currently in circulation. The remaining 11 billion tokens are reserved for strategic ecosystem growth.

These 11 billion tokens are allocated as follows: 35% is dedicated to ecosystem incentives such as staking, farming, and liquidity mining; 25% supports product development across the Rezor stack; 15% is earmarked for strategic partnerships; 10% fuels community campaigns and airdrops; another 10% is allocated for centralized exchange liquidity; and the final 5% is reserved in the treasury for governance decisions and long-term sustainability.

Importantly, there is no token allocation set aside for the team or advisors, underscoring Rezor's commitment to transparency and community trust.

Circulating Supply Disclosure: While the current circulating supply of \$REZOR is approximately 40 billion, this figure may increase in the future as more centralized exchanges onboard the token and conduct 1:1 swaps for users. Additionally, tokens currently held by unclaimed or inactive users may eventually be brought into circulation. In such cases, the foundation's holdings will reduce accordingly. The Rezor whitepaper is a living document and will be updated to reflect these changes transparently as they occur.

Burn Mechanism

To further enhance long-term token value, Rezor implements a smart burn model tied to product usage. Ten percent of all swap fees collected through the Rezor Wallet's aggregator will be burned. Similarly, 10% of all fees earned via Rezor Swap will be burned as a way to reduce token supply over time.

On the centralized exchange, 10% of trading fees, listing fees, and any other forms of revenue—such as premium subscriptions—will be allocated for scheduled burns. These mechanisms are not fixed and will be introduced progressively based on market conditions and governance input.

A Digital Nation

Rezor is more than a protocol—it is a digital nation. Each product plays the role of a public utility: the wallet as finance, the swap as commerce, the exchange as global trade, and the blockchain as infrastructure. In this ecosystem, users are not just participants but citizens with the ability to vote, contribute, and build.

This metaphor illustrates Rezor's ambition to evolve into a sovereign digital economy where people across borders can transact, collaborate, and grow wealth.

Ecosystem Synergy

Each Rezor product is designed to amplify the others. The wallet brings in users. The swap drives liquidity and engagement. The blockchain hosts dApps and smart contracts. The exchange enables mainstream access. Together, they create a flywheel of growth and value accrual. At the center of it all is the \$REZOR token, benefiting from every transaction, deployment, and trade within the ecosystem.

Interoperability & Open Access

Rezor is open by design. It offers APIs, SDKs, and smart contract toolkits for developers and businesses to build on its infrastructure. Whether integrating a central bank digital currency (CBDC), deploying a decentralized application, or offering a tokenized loyalty program, the Rezor ecosystem provides the tools to support global adoption.

The Future of Work & Digital Finance

As the world embraces remote work and digital entrepreneurship, Rezor is positioning itself as a platform that supports the new economy. Through features like crypto payroll, tokenized revenue streams, and global payment rails, Rezor empowers the next generation of creators, workers, and builders to transact freely and securely across borders.

Governance & Treasury

\$REZOR holders will play a key role in shaping the future of the platform. Governance will be decentralized, allowing token holders to vote on protocol upgrades, funding proposals, and ecosystem partnerships. A portion of all revenue generated by Rezor's products may be returned to the treasury, ensuring sustainable funding for future initiatives.

Disclaimer

Participation in the Rezor ecosystem carries inherent risks. The \$REZOR token is not an investment contract, security, or guarantee of profits. It is a utility token designed for use within the Rezor ecosystem. This document is for informational purposes only and should not be considered financial or legal advice. All participants are encouraged to do their own research and consult with advisors before engaging with blockchain products.
